Diagram illustrating the relationship between two sets of nodes, A and C, separated by a vertical line. Node A is connected to RA, AR, and A. Node C is connected to AR, A, and R. Node R is connected to A and C. Node A is connected to RA and AR. Node C is connected to AR and A. Node R is connected to A and C. Node A is connected to RA and AR. Node C is connected to AR and A. Node R is connected to A and C.

The figure consists of two side-by-side plots, labeled (a) and (b), each showing five stacked histograms representing the probability distribution $P(x)$ at different times t . The horizontal axis for both plots is x , ranging from -10 to 10. The vertical axis is $P(x)$, ranging from 0 to 0.001.

- Panel (a): Exact solution.** The distributions are shown for $t = 0, 8, 12, 23, 27$. As time increases, the peak height decreases and the distribution spreads wider.
- Panel (b): Numerical solution.** The distributions are also shown for $t = 0, 8, 12, 23, 27$. These distributions closely match those in panel (a).

Figure 1: Schematic representation of the experimental design. The figure is divided into two main sections: 'Pretest' and 'Main Experiment'. The 'Pretest' section shows a sequence of stimuli: a fixation cross, a word, a word, and a word, followed by a fixation cross. The 'Main Experiment' section shows a sequence of stimuli: a fixation cross, a word, a word, a word, and a word, followed by a fixation cross. The stimuli are presented in a sequence that allows for the measurement of the effect of word frequency on the processing of the word.

Item	12/31/2023	12/31/2022	12/31/2021	12/31/2020	12/31/2019
